EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kevin G. Mierzwa on 10/21/2004:

In claim 1, line 5, before "lateral characteristic", --the-- has been inserted.

In claim 11, line 9, before "lateral acceleration", --the--has been inserted, same line after "the lateral characteristic other than", --the--has been inserted. On line 10, before "lateral acceleration", --the--has been inserted, same line after "lateral acceleration and", --the--has been inserted. On line 11, before "later acceleration", --the--has been inserted.

In claim 16, line 8, "the lateral acceleration sensor," has been deleted. On line 10, before "lateral acceleration", --the--has been inserted. On line 13, before "lateral acceleration", --the--has been inserted, same line before "lateral characteristic", --the--has been inserted. On line 14, before "lateral acceleration", --the--has been inserted.

EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

This communication is an Examiner's reasons for allowance in response to application filed on 10/24/2003, assigned serial 10/605,772 and titled "Kinetic Energy Density Rollover Detective Sensing Algorithm."

Art Unit: 3663

The following is the Examiner's statement of reasons for the indication of allowable subject matter:

The applicant's amendment and arguments filed on 07/27/2004 has been fully considered. The examiner has carefully reconsidered the application and reviewed the art rejection and the cited prior art in response to the applicant's amendment. The reference to Watson although discloses a vehicle rollover detection system and method, comprising a lateral accelerometer (18) for measuring the lateral acceleration of the vehicle (Watson, figure 2, lateral accelerometer 18), and the lateral velocity sensor is provided for measuring the lateral velocity (Watson, abstract), Watson does not disclose that comparing the lateral acceleration and lateral characteristic to a threshold that is a function of the lateral acceleration and the lateral characteristic.

After performing further search, the examiner has realized none of the references fairly discloses the a system/method for comparing the lateral acceleration and the lateral characteristic other than lateral acceleration to a threshold that is a function of lateral acceleration and the lateral characteristic other than lateral acceleration.

The prior art does not contain any teaching that would lead a skilled person to modify the closest prior and thereby arrive at the invention. Therefore, the claimed invention is now patentable over the prior art.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tuan C To whose telephone number is (703) 308-6273. The examiner can normally be reached on from 8:00AM to 5:00PM.
